| Sole material  | Double density PU/RU                      |
| Upper material | PU coated leather, Microfiber,<br>Textile |

The renowned Arktis occupational boot is now available with the TractionPro friction sole, developed (primarily) for safety footwear. The Primaloft® lining material keeps the heat from the foot inside the boot even if the material is compressed. Primaloft® keeps the feet 38% warmer in dry conditions, and twice as warm in wet conditions compared to competing materials. Primaloft® is made from 90% recycled fibres from plastic bottles. The laces on top protect the foot even in very snowy conditions.
