FO HRO SRC

Sole material Double density PU/RU, TractionPro

Upper material PU coated leather, Microfiber

The renowned Arktis occupational boot is now available with the Sievi TractionPro® friction sole, developed (primarily) for safety footwear. The PrimaLoft® lining material keeps the heat from the foot inside the boot even if the material is compressed. PrimaLoft® keeps the feet 38% warmer in dry conditions, and twice as warm in wet conditions compared to competing materials. PrimaLoft® is made from 90% recycled fibres from plastic bottles. The laces on top protect the foot even in very snowy conditions.
